

Labour Force Survey 2016-17

* Household:-

A "household" is defined as a person or group of persons who live together in the same house or compound who share the same housekeeping arrangements and who are created for as one unit. Members of a household are not necessarily related to each other, either by blood or marriage. Conversely, members who live together in the same house or compound and are related by blood or marriage do not necessarily belong to the same household. To be considered a household member, an individual must reside with other household members in the dwelling for a substantial part of the year (e.g., six-month criterion) and must not be a member of any other household.

* Labour Force Participation Rate:-

The labour force participation rate is a measure of the proportion of a country's working-age population that engages actively in the labour market,

either by working or looking for work. It provides an indication of the size of the supply of labour available to engage in the production of goods and services, relative to the population at working age.

The working-age population is the population above the legal working age - often aged 15 and older. The labour force participation rate is defined as the ratio of the labour force to the working-age population expressed as a percentage. The labour force is the sum of the number of persons employed and the number of persons unemployed. Thus, the measurement of the labour force participation rate requires the measurement of both employment and unemployment.

The labour force participation rate is related by definition to other indicators of the labour market. The inactivity rate is equal to 100 minus the labour force participation rate, when the participation rate is expressed as a number between 0 and 100.

for own consumption.

(a) Paid employment

(i) at work - persons who during the reference period performed some work for wage or salary, in cash or in kind;

(ii) with a job but not at work - persons who, having already worked in their present job, were temporarily not at work during the reference period but had a formal attachment to their job.

(b) Self-employment

(i) at work - persons who during the reference period performed some work for profit or family gain, in cash or in kind;

(ii) with an enterprise but not at work - persons working with an enterprise, which may be a business enterprise, a firm or a service undertaking, who were temporarily not at work during the reference period for any specific reason.

* Unemployment:-

The international standard definition of unemployment is based on the following three criteria,

* Labour Force:-

The economically active population includes both employed and unemployed persons. The currently active population is known as the "Labour Force". The economically active population comprises all persons of either sex who supply their labour for the production of goods and services during a specified time reference period. Production includes all individual or collective goods or services that are supplied to units other than their producers, or intended to be supplied, including the production of goods or services used in the process of producing such goods or services; the production of all goods that are retained by their producers for their own final use; the production of housing services by owner-occupiers and of domestic and personal services produced by paid domestic staff.

* Employment:-

The ILO definition of employment provides separate criteria for persons in paid employment and persons in self-employment in order to accommodate the idea that employment covers any work, be it for wage or salary, profit or family gain and including the production of goods

which should be satisfied simultaneously; "without work", "currently available for work", and "seeking work".

(a) without work - not in paid employment nor self-employed.

(b) currently available for work - available for paid employment or self-employment during the reference period (one week).

(c) seeking work - had taken specific steps in a specified reference period (one month) to seek paid employment or self-employment.

* Informal Sector:-

The informal sector consists of unregistered and/or small unincorporated private enterprises engaged in the production of goods or services for sale or barter. The enterprises typically operate on a small scale at a low level of organization, with little or no division between labour and capital as factors of production. Labour relations are based mostly on casual employment, kinship or personal and social relations. Employment in the informal sector refers to the total number of jobs in informal sector enterprises.

falling on the working-age population.

Total dependency ratio in 2016-17 was 59.5 percent; by area, it was 51.5 percent in urban areas and 62.9 percent in rural areas. The dependency ratio for the youth population was 45.8 percent in urban areas and 54.2 percent in rural areas. Among the elder population, the dependency ratio was 5.7 percent in the urban and 8.7 percent in the rural areas.

* Female-Headed Households and Household Size:-

With nearly 85.8 percent households had a male head, compared with 14.2 percent with a female head. By area, female-headed households are more, (15.1 percent) in urban areas, compared with (13.8 percent) in the rural areas.

* Households by Sources of Lighting:-

The use of electricity increasing over the period. Access to electricity was 72.3 per cent in 2015-16 where as it was 79.0 per cent during 2016-17. There exists clear rural-urban variation in the access of electricity, it was 72.4 per cent for the rural areas

* Population Characteristics:-

In 2016-17, Bangladesh's total population was 161.3 million; of them 81.0 million were male and 80.3 million were female. The percentage distribution was generally high, almost one third of the population from the age group between 0-14 years (32.4 percent), were still very high when compared with the percentage of those aged 65 or older (4.9 percent). In sum, Bangladesh is a country with a young population. The sex ratio of male and female population was a bit higher in rural (101.3) areas than that of urban (99.5) areas.

* Dependency Ratio:-

The dependency ratio measures the proportion of children and older persons to the proportion of persons of workforce age. For the labour force survey the age dependency ratio was defined as the ratio of the sum of the population younger than 15 years and the population aged 65 or older, divided by the number of persons aged between 15 and 64 years. The age dependency ratio is thus a summary indicator of the burden

and 94.9 for the urban areas. With the increased use of electricity as the source of lighting, the use of other sources such as kerosene is decreasing consequently.

* Households by Type of Fuel Used for Cooking:-

In 2016-17

wood/ firewood (41.3 percent) were the main fuel used for cooking by households, followed by Dung/ Leave/ Straw (38.7 percent) and natural gas/ LP gas (19.6 percent). It is notable that, use of natural gas increased in 2016-17 (19.6 percent) compared to 2015-16 (18.7 percent). There exists wide variation in the use of fuel in the urban and rural areas. In the urban areas, as high as 53.9 percent used natural gas for cooking compared to only 5.4 percent in the rural areas.

* Household by Toilet Facility:-

46.0 percent of the households reported to use sanitary toilet, followed by 37.0 percent use pit latrine, 15.2 percent households use katcha latrine and the rest 1.8 percent of the households had no toilet facility. In the city corporation area, the highest 88.4 percent use sanitary toilet as against

61.3 percent of such facility in the urban areas and only 34.9 percent in the rural areas. Pit and Katcha latrine was very much dominated in the rural areas compared to urban and city corporation areas. The use of sanitary toilet has increased significantly between 2015-16 at 41.1 percent and 2016-17 at 46.0 percent.

*** Households by Sources of Drinking Water:-** Tube well was the dominant (88.0 percent) type of source of drinking water both in rural (95.6 percent) and urban (86.7 percent) and city corporation (47.4 percent) areas in 2016-17. However, tap water is the second highest (10.1 percent) source of drinking water.

*** Literacy Profile:-**

Literacy is defined as the ability to read and write in either Bangla, the mother tongue of Bangladesh or in some other language. In 2016-17, an estimated 69.0 percent of the population aged 15 or older were literate. Urban areas reflected the higher literacy rate, at 78.0 percent, compared with 65.2 percent for the rural areas. A wide gap was evident between the sexes, with the male literacy

rate at 72.7 percent and female literacy rate at 65.3 percent.

Of the estimated 91.4 percent literacy among the country's youth (aged 15-29), it was 91.3 percent for males and 91.4 percent for females ~~for~~ overall. By area the literacy rate among the youth was highest in urban areas, at 93.1 percent, and again with a very little gap between the sexes, at 93.5 percent for urban males and 92.7 for urban females.

There exists urban-rural variation in respect of literacy rate, the literacy rate was higher in city corporation (79.9 percent) than that of urban (76.7 percent) and rural (65.2 percent) areas.

* Education Profile:-

An estimated 11.1 percent of the population aged 15 or older was attending school at the time of the survey, while 29.3 percent had never attended school and 59.6 percent was attended school in the past. About 12.6 percent of all male aged 15 or older and 9.6 percent of all females were attending school at the time

of the survey. Among those who had never attended school, the proportion of females (31.9 percent) was much higher than that of males (26.7 percent).

An estimated 30.6 percent of the population aged 15 or older had completed nothing, i.e., no class passed, 22.3 percent had completed the primary level, 35.0 percent had completed secondary school and 4.2 percent had completed tertiary level of education.

* Working-age population:-

The country's working age population (aged 15 or older) experienced dramatic changes over the past decade and around 109.1 million in 2016-17.

41.3 millions persons were 15-29 years old (of them, 19.6 million were male and 21.6 million were female) and 59.9 million persons were aged 30-64 years old (29.9 million males and 30.0 million females). Around 7.9 million persons were aged 65 or older. The largest proportion of working-age population was in the urban areas, at 69.8 percent whereas it was at 66.7 percent of the total rural population.

* Labour Force Participation Rate:-

The labour force participation rate (LFPR) is defined as the number of persons in the labour force, given as a percentage of the working-age population. The labour force participation rate provides information about the relative size of the labour supply currently available for the production of goods and services. LFPR is defined as the number of persons in the labour force (employed + unemployed) expressed as a percentage of the total working age population.

$$LFPR = \frac{\text{Total labour force}}{\text{Total working age population}} \times 100\%$$

Bangladesh's LFPR in 2016-17 was estimated 58.2 percent.

By sex, the rate was 80.5 percent for males and 36.3 percent for females. The rate was slightly higher for the rural areas (59.3 percent) than that of urban (55.7 percent). The highest labour force participation rates by broad age groups were among workers aged 30-64 (68.4 percent), followed by 15-29 (48.7 percent) and lowest in 65+ age group (31.0 percent).
