

Role of WB/IMF/WT0

* Washington Consensus was ^{presented} ~~was signed~~ in 1990. The Washington Consensus recommended structural reforms that increased the role of market forces in exchange for immediate financial help. It refers to a set of free-market economic policies supported by prominent financial institutions such as the International Monetary Fund, the World Bank and the U.S. Treasury.

To ensure free market, there are some reforms listed in the Washington Consensus. Such as -

- ↳ Public spending
- ↳ Trade policy reform
- ↳ Privatization

① Public Spending

Reduce expenditures on indiscriminate subsidies; target spending on health, education and (to some extent) infrastructure. In the 2023-24 fiscal year budget of Bangladesh, the share of agricultural sector is 5.70 percent, health is 5.00 percent, education is approximately 4 to 5 percent, which are relatively lower than developed countries. On the other hand, the share of transportation

& infrastructure in the budget is 11.50 and in defence is 5.50 percent. It is the incentive of WB to spend more on ~~the~~ infrastructure & defense. More spending on these sectors means more loans from WB/IMF. Bangladesh government spend huge amount of money in infrastructure development such as establishing power plant such as coal based power plant in Paya, Rampal, Matarbari; building port ~~for~~ and highways for export and import. These infrastructure development needs a big loan from WB/IMF. Govt. reduce public spending to repay the loan with interest.

Bangladesh spend a big amount of money in German's sector. It is claimed that it creates employment and Bangladesh earn foreign currency by exporting clothings. But big multinational brands like H & M, Walmart, Chanel buy cheap clothings from Bangladesh

and sell them with a big profit. So the main beneficiary are the multinational ~~co~~ brands.

② Trade Policy Reform

The main target of trade policy reform is removing trade restriction on foreign imports. It ensures the access of multinational corporations. For example, import of powdered milk of Dano/Arda affected the local dairy production of Bangladesh. Bangladesh's dairy firms almost destroyed because of the importation of Dano/Arda. Import of Syngenta seed affected the local ~~and traditional~~ seed. Because big multinational corporations get monetary help from their government, it is easy ~~to~~ for them to produce their goods relatively lower cost than our local industries. It creates permanent dependency on MNCs. Though WB talks about the local industrialization and self-sufficiency of a country through

trade policy reform, it actually creates dependency on foreign products.

(iii) Privatization

Another policy area of Washington Consensus is privatization of state owned enterprises. WB/IMF claims that state owned enterprises are loss making, inefficient and subsidized. To make them efficient and profit making, ~~price~~ selling them to private firms is necessary. Agro-based local industry such as jute mill/sugar mill of Bangladesh were self-sufficient and independent because all the raw materials were produced within the country. But when Bangladesh took loan from IMF in 1990-91, some of these industries got shut down and some were privatized. On the other hand, World Bank promotes export oriented ~~intensive~~ industries such as garments, shipyards etc. It generally helps the

The Washington Consensus
Development

big business MNCs.

So the Washington Consensus / WB / IMF
creates dependency on the MNCs and serve
the interest of them.

Robert's Model

1. The first step is to create a vision of the future.
2. The second step is to create a mission statement.
3. The third step is to create a set of core values.
4. The fourth step is to create a set of strategic goals.
5. The fifth step is to create a set of tactical goals.

1. The first step is to create a vision of the future.
