

Annexure i : Concept and Definitions

Age coverage

Age is a strong determinant of labour market. Common age cut-offs and categories are important. The labour-related questions of the survey refer to the population of 15 years old and older. The following age ranges are used in presenting the statistics: 15–24; 25–34; 35–44; 45–54; 55–64; and 65 and over. Besides, statistics is provided separately for youths as the youths are more prone to unstable transition to labour market. However, in setting the minimum LFS coverage age is the fact that the Government of Bangladesh, being aware that many young people, who are unable to continue with higher schooling, enter the labour market instead, has set the legal age for admission to employment at 14 completed years. Given that, inclusion of persons aged 15 years or older may result in the undercount of persons employed or unemployed in the country.

Sex

Sex (male or female) of every individual is recorded, as sex disaggregation of data is a fundamental requirement for gender statistics and in particular for the analysis of the gender gap in the access to the labour market. For policy purposes, all core indicators are broken down by sex, in order to maximize information on any gender gap.

Dwelling

A dwelling is a separate and independent place of abode intended for habitation by one household. Although intended for habitation by one household, a dwelling may, at the time of the survey, be occupied by more than one household.

Household

A household is defined as a group of persons who live together and make common provision for food and other essentials for living. The people in the group may be related or unrelated or a combination of both. A household may consist of only one person or several persons. Stemming from the above definition, lodgers or other permanent residents who live and take their meals with the household are to be counted as household members, even though they may have no blood relationship with the household head. Servants or other paid domestic employees should be counted as part of the household. People who live in the same dwelling, but do not share food expenses or do not eat meals together, are not members of the same household. To be considered a household member, an individual must reside with the other household members in the dwelling for a substantial part of the year (e.g., six-month criterion) and must not be a member of any other household.

Head of household

The Head of the household is the person who manages the income earned and expenses incurred by the household and who is the most knowledgeable person concerning other members of the household. If he or she is not present or available (for example, he or she may be living abroad temporarily), an alternative "Head" must be selected in consultation with senior household members. The following criteria can be taken into account (in priority order) in helping you to decide who the Head of household is:

- a. The household member who is accepted as the Head by other household members.
- b. The household member who is legally responsible for the dwelling (owner or lease holder).
- c. The household member who is the main income earner.
- d. The household member who does most of the household shopping.
- e. The oldest household member.

Work¹

The concept of *Work* is a complex one which must be understood if it is to be used properly in the Labour Force Survey. The questionnaire asks the respondent: “During the previous week, did you do any work for a wage, salary, commission, tips or any other pay, even if only for one hour?” Some examples of work activities are presented further below.

More specifically, ***work comprises any activity performed by persons of any sex and age to produce goods or to provide services for use by others or for own use.*** The concept of work is aligned with the General production boundary as defined in the System of National Accounts 2008 (2008 SNA) and its concept of economic unit. Examples of work activities to be classified as employment:

- ≠ Vending newspapers in the street; cleaning car windshields for tips at traffic lights.
- ≠ Managing one’s own business or farm even though not involved in producing the output.
- ≠ Repairing of work equipment for future operation, e.g. a fisherman repairing his boat or net for future outings.
- ≠ Buying or installing equipment and ordering supplies in preparation for opening a new business.
- ≠ Work in the household enterprise without pay, but with a share in the earnings/profits of the enterprise.
- ≠ Unpaid work in an economic enterprise operated by a related person living in the same household (e.g. work such as cleaning and grading fruits/vegetables).
- ≠ Outwork i.e., a practice prevalent in some enterprises where all or part of the production is allocated to different persons or households to be carried out at home and for which these persons or households receive payment on a piece-rate basis, e.g. the master weaver assigning bobs to different households.
- ≠ Exchange work i.e., a practice in some countries whereby labour is exchanged between households for productive purposes such as the work performed by a farm operator of members of his family on the farm of another operator.
- ≠ Paid domestic services, including baby sitting and teaching children in other persons’ homes in exchange for cash payment, board and lodging or payment in kind such as clothing.
- ≠ Cooking food for labourers on one’s farm where food is provided as part of the labourer’s pay.
- ≠ Paid apprenticeship and on-the-job training which is associated with the productive activities of an enterprise.
- ≠ Paid religious activities of members of religious orders.
- ≠ Military duties of career military personnel and conscripts as well as engagements in equivalent civilian services.

Labour Force

The concept labour force refers to the current supply of labour for the production of goods and services in exchange for pay or profit. The form of work identified as employment sets the reference scope of activities for labour force statistics. In the QLFS, the “labour force” refers to persons 15 years or older who contribute or are available to contribute to the production of goods and services in the country; and consists of employed and unemployed.

Labour force status

Categories for labour force status used to break down labour market indicators at the individual level are based on the following categories:

- Employed
- Unemployed

¹Extracts from: International Labour Office. *Resolution concerning statistics of work, employment and labour underutilization*. Report III, 19th ICLS (Geneva, 2-11 October 2014), pp. 47-65.

- Not in the labour force.

Persons in employment

Persons in employment are defined as all those of working age who, during a short reference period, were engaged in any activity to produce goods or provide services for pay or profit or own use production of goods. They comprise:

- employed persons “at work”, i.e. who worked in a job for at least one hour;
- employed persons “not at work” due to temporary absence from a job, or to working-time arrangements (such as shift work, flexitime and compensatory leave for overtime).

One hour criterion

A person is considered to have engaged in a given form of work when performing such form of work for at least one hour during the relevant, short reference period. Use of this one-hour criterion ensures coverage of all the activities engaged in, including part-time, temporary, casual or sporadic activities, as well as comprehensive measurement of all inputs of labour into production.

Temporary absence from work

Employed persons on “temporary absence” during the PREVIOUS WEEK refers to those who, having already worked in their present job, were “not at work” for a short duration but maintained a job attachment during their absence. In such cases:

- “job attachment” is established on the basis of the reason for the absence and in the case of certain reasons, the continued receipt of remuneration, and/or the total duration of the absence as self-declared or reported, depending on the statistical source;
- the reasons for absence that are by their nature usually of short duration, and where “job attachment” is maintained, include those such as sick leave due to own illness or injury (including occupational); public holidays, vacation or annual leave; and periods of maternity or paternity leave as specified by legislation;
- reasons for absence where the “job attachment” requires further testing, include among others: parental leave, educational leave, care for others, other personal absences, strikes or lockouts, reduction in economic activity (e.g. temporary lay-off, slack work), disorganization or suspension of work (e.g. due to bad weather, mechanical, electrical or communication breakdown, problems with information and communication technology, shortage of raw materials or fuels):
 - For these reasons, a further test of a duration threshold and/or receipt of remuneration (EMP_09) should be used. The threshold should be, in general, not greater than three months taking into account periods of statutory leave entitlement specified by legislation or commonly practiced, and/or the length of the employment season so as to permit the monitoring of seasonal patterns. Where the return to employment in the same economic unit is guaranteed this threshold may be greater than three months.
 - For operational purposes, where the total duration of the absence is not known, the elapsed duration may be used.

Included in employment are:

- (a) persons who work for pay or profit while on training or skills-enhancement activities required by the job or for another job in the same economic unit, such persons are considered as employed “at work” in accordance with the international statistical standards on working time;
- (b) apprentices, interns or trainees who work for pay in cash or in kind;
- (c) persons who work for pay or profit through employment promotion programmes;
- (d) persons who work in their own economic units to produce goods intended mainly for sale or barter, even if part of the output is consumed by the household or family;
- (e) persons with seasonal jobs during the off season, if they continue to perform some tasks and duties of the job, excluding, however, fulfilment of legal or administrative obligations (e.g. pay taxes), irrespective of receipt of remuneration;
- (f) persons who work for pay or profit payable to the household or family:
 - i. in market units operated by a family member living in the same or in another household, or
 - ii. performing tasks or duties of an employee job held by a family member living in the same or in another household.
- (g) regular members of the armed forces and persons on military or alternative civilian service who perform this work for pay in cash or in kind.

Excluded from employment are:

- (a) apprentices, interns and trainees who work without pay in cash or in kind;
- (b) participants in skills training or retraining schemes within employment promotion programmes, when not engaged in the production process of an economic unit;
- (c) persons who are required to perform work as a condition of continued receipt of a government social benefit such as unemployment insurance;
- (d) persons receiving transfers, in cash or in kind, not related to employment;
- (e) persons with seasonal jobs during the off season, if they cease to perform the tasks and duties of the job;
- (f) persons who retain a right to return to the same economic unit but who were absent for reasons specified in paragraph 29(c), when the total duration of the absence exceeds the specified threshold and/or if the test of receipt of remuneration is not fulfilled. For analytical purposes, it may be useful to collect information on total duration of absence, reason for absence, benefits received, etc.;
- (g) persons on indefinite lay-off who do not have an assurance of return to employment with the same economic unit.

Full-time employed

The *fully employed* group comprise those who worked full usual or actual number of hours or more in the reference week. In the QLFS of Bangladesh, this is considered to be 40 hours. The questionnaire asks questions on time-related underemployment of all employed people who usually/actually worked less than statutory hours during the previous week.

Persons in own-use production work

Own-use production of goods

These are all those of working age who, during a short reference period, performed any activity to produce goods for own final use, where:

- a) “any activity” refers to work performed in the various activities under paragraph (b) and (c) below for a cumulative total of at least one hour;
- b) production of “goods” (within the 2008 SNA production boundary) covers:
 - i. producing and/or processing for storage agricultural, fishing, hunting and gathering products;
 - ii. collecting and/or processing for storage mining and forestry products, including firewood and other fuels;
 - iii. fetching water from natural and other sources;
 - iv. manufacturing household goods (such as furniture, textiles, clothing, footwear, pottery or other durables, including boats and canoes);
 - v. building, or effecting major repairs to, one’s own dwelling, farm buildings, etc.

Own-use provision of services

These are all those of working age who, during a short reference period, performed any activity to provide services for own final use, where:

- b) provision of “services” (beyond the 2008 SNA production boundary but inside the General production boundary) covers:
 - i. household accounting and management, purchasing and/or transporting goods;
 - ii. preparing and/or serving meals, household waste disposal and recycling;
 - iii. cleaning, decorating and maintaining one’s own dwelling or premises, durables and other goods, and gardening;
 - iv. childcare and instruction, transporting and caring for elderly, dependent or other household members and domestic animals or pets, etc.
- c) “for own final use” is interpreted as production where the intended destination of the output is *mainly* for final use by the producer in the form of capital formation, or final consumption by household members, or by family members living in other households:
 - i. the intended destination of the output is established in reference to the specific goods produced or services provided, as self-declared (i.e. mainly for own final use);
 - ii. in the case of agricultural, fishing, hunting or gathering goods intended mainly for own consumption, a part or surplus may nevertheless be sold or bartered .

Essential items that need to be collected, using various statistical sources, to support national accounts, and for household and sectoral analyses of own-use production work are:

- a) the working time of own-use producers associated with each relevant activity cluster collected using short time units (such as minutes or hours according to the source);
- b) the estimated value of the production (i.e. goods or services), and/or the amount of goods, consumed or retained by the household and by family members in other households;
- c) the estimated amount and/or value of any part or surplus sold or bartered, where applicable; and
- d) the expenses incurred in relation to this production.

Subsistence foodstuff producers

Subsistence foodstuff producers constitute an important subgroup of persons in own-use production work. They are defined as:

- a) all those who performed any of the activities in order to work on one's own plot, farm, or help grow farm produce or tending animals, catch any fish, prawns, shells, wild animals or other food for the household's own consumption or the household's own consumption;
- b) excluded are persons who engaged in such production as recreational or leisure activities or for commercial purpose.

Labour underutilization (LU)

Labour underutilization refers to mismatches between labour supply and demand, which translate into an unmet need for employment among the population. Measures of labour underutilization include, but may not be restricted to:

- i. Time-related underemployment, when the working time of persons in employment is insufficient in relation to alternative employment situations in which they are willing and available to engage.
- ii. Unemployment, reflecting an active job search by persons not in employment who are available for this form of work.
- iii. Potential labour force, referring to persons not in employment who express an interest in this form of work but for whom existing conditions limit their active job search and/or their availability.

Persons in time-related underemployment

Persons in time-related underemployment are defined as all persons in employment who, during a short reference period, wanted to work additional hours, whose working time in all jobs was less than a specified hours threshold, and who were available to work additional hours given an opportunity for more work, where:

- a) the "working time" concept is hours actually worked or hours usually worked, dependent on the measurement objective (short or long-term situations) and in accordance with the international statistical standards on the topic;
- b) "additional hours" may be hours in the same job, in an additional job(s) or in a replacement job(s);
- c) the "hours threshold" is based on the boundary between full-time and part-time employment, or on working time norms as specified in relevant legislation or national practice, and set for specific worker groups;
- d) "available" for additional hours should be established in reference to a set short reference period that reflects the typical length of time required in the national context between leaving one job and starting another.

Persons in unemployment

Persons in unemployment are defined as all those of working age who were not in employment, carried out activities to seek employment during a specified recent period and were currently available to take up employment given a job opportunity.

- (a) The *not in employment* criterion draws the distinction between employment and unemployment. *Not in employment* should be interpreted as total lack of work or, more precisely, as not having been employed during the previous week. Thus, a person is to be considered as *not in employment* if s/he did not work at all during the previous week (not even for one hour) nor was temporarily absent from work as determined by the definition of employment. The other two criteria of the standard definition of unemployment, *currently available to take up*

employment and *seeking employment*, serve to distinguish those of the non-employed population who are unemployed from those who are outside the labour force.

- (b) To *seek employment* refers to any activity when carried out, during a specified recent period comprising the previous four weeks or one month, for the purpose of finding a job or setting up a business or agricultural undertaking. This includes also part-time, informal, temporary, seasonal or casual employment, within the national territory or abroad. Examples of such activities are:
 - (i) arranging for financial resources, applying for permits, licences;
 - (ii) looking for land, premises, machinery, supplies, farming inputs;
 - (iii) seeking the assistance of friends, relatives or other types of intermediaries;
 - (iv) registering with or contacting public or private employment services;
 - (v) applying to employers directly, checking at worksites, farms, factory gates, markets or other assembly places;
 - (vi) placing or answering newspaper or online job advertisements;
 - (vii) placing or updating résumés on professional or social networking sites online;
- (c) the point when the enterprise starts to exist should be used to distinguish between search activities aimed at setting up a business and the work activity itself, as evidenced by the enterprise's registration to operate or by when financial resources become available, the necessary infrastructure or materials are in place or the first client or order is received, depending on the context;
- (d) "currently available" serves as a test of readiness to start a job in the present, assessed with respect to a short reference period comprising that used to measure employment:
 - (i) depending on national circumstances, the reference period may be extended to include a short subsequent period not exceeding two weeks in total, so as to ensure adequate coverage of unemployment situations among different population groups. Here one week is considered to compare the previous labour force survey data.

Included in unemployment are:

- (a) **future starters** defined as persons *not in employment* and *currently available* who did not *seek employment* because they had already made arrangements to start a job within a short subsequent period, set according to the general length of waiting time for starting a new job in the national context but generally not greater than three months;
- (b) participants in skills training or retraining schemes within employment promotion programmes, who on that basis, were *not in employment*, not *currently available* and did not *seek employment* because they had a job offer to start within a short subsequent period generally not greater than three months;
- (c) persons *not in employment* who carried out activities to migrate abroad in order to work for pay or profit but who were still waiting for the opportunity to leave.

Youth unemployment

Youth unemployment is widely viewed as an important policy issue for many countries, regardless of their stage of development. For the purpose of this indicator, the term “youth” covers persons aged 15 to 24 years and “adult” refers to persons aged 25 years and over. This report considers the term “youth” covers persons aged 15 to 24 years and “adult” refers to persons aged 25 years and over. Sometimes, the term “youth” covers persons aged 15 to 29 years and “adult” refers to persons aged 30 years and over. The “Department of Youth, Bangladesh” is defined youth as persons aged 18 to 35 years and some basic statistics is provided in this report for their own use following this age group.

Potential labour force

Potential labour force is defined as all persons of working age who, during the short reference period, were neither in employment nor in unemployment and:

- (a) carried out activities to “seek employment”, were not “currently available” but would become available within a short subsequent period established in the light of national circumstances (i.e. unavailable jobseekers); or
- (b) did not carry out activities to “seek employment”, but wanted employment and were “currently available” (i.e. available potential jobseekers).

Working time²

Hours usually worked

Hours usually worked is the typical value of hours actually worked in a job per short reference period such as one week, over a long observation period of a month, quarter, season or year that comprises the short reference measurement period used. Hours usually worked applies to all types of jobs (within and beyond the SNA production boundary).

Hence, the concept of usual hours of work differs from that of actual hours worked, in that the usual hours of work refers to a typical period rather than to a specified reference period as in the case of actual hours worked

Usual hours of work per week or per day for a given activity may be defined as hours worked during a typical week or day in that activity. The concept of usual hours of work applies both to persons at work and to those temporarily absent from work.

For jobs that have started during the reference period the usual hours of work may refer to the number of hours per week the employee is expected to work in that job, determined, for example, by the terms of agreement with the employer or by comparison with other workers in a similar position. As in the case of actual hours worked, usual hours of work for multiple jobholders should equal the hours of work at all jobs.

Main job/business activity

The main job/business is that with the longest hours usually worked.

Employment in the informal economy

The QLFS of Bangladesh will assist in identifying employment in the informal economy, i.e. employment in the informal sector and informal employment. According to the ILO definition, the term 'informal economy' refers to all economic

²International Labour Office. *Resolution concerning the measurement of working time* adopted by the 18th International Conference of Labour Statisticians (24 November – 5 December 2008). Geneva, 2008; at: http://www.ilo.org/wcmsp5/groups/public/---dgreports/---stat/documents/normativeinstrument/wcms_112455.pdf

activities by workers and economic units that are – in law or in practice – not covered or insufficiently covered by formal arrangements. These activities are not included in the law, which means that they are operating outside the formal reach of the law; or they are not covered in practice, which means that – although they are operating within the formal reach of the law, the law is not applied or not enforced; or the law discourages compliance because it is inappropriate, burdensome, or imposes excessive costs."³Importantly, these activities should not be carried out in violation of the criminal law and relevant legislation acts.

As mentioned above, employment in the informal economy refers to two concepts:

- a. Employment in the informal sector
- b. Informal employment

While these concepts are related and complement each other, they are different as they refer to different aspects of the informalisation of employment, as is shown below:

- (i) Employment in the informal sector is an *enterprise-based* concept; and
- (ii) Informal employment is a *job-based* concept

Employment in the informal sector

It comprises all jobs in *informal sector enterprises*, or all persons who, during a given reference period, were employed in at least one *informal sector enterprise*, irrespective of their status in employment and whether it was their main or a secondary job.

Informal sector enterprises were defined by the 15th ICLS on the basis of the following criteria: (i) they are private unincorporated enterprises (excluding quasi-corporations), i.e. enterprises owned by individuals or households that are not constituted as separate legal entities independently of their owners, and for which no complete accounts are available that would permit a financial separation of the production activities of the enterprise from the other activities of its owner(s). Private unincorporated enterprises include unincorporated enterprises owned and operated by individual household members or by several members of the same household, as well as unincorporated partnerships and cooperatives formed by members of different households, if they lack complete sets of accounts.⁴

Their size in terms of employment is below a certain threshold, and/or they are not registered under specific forms of national legislation (such as factories' or commercial acts, tax or social security laws, professional groups' regulatory acts, or similar acts, laws or regulations established by national legislative bodies as distinct from local regulations for issuing trade licenses or business permits), and/or their employees (if any) are not registered. In the QLFS of Bangladesh, we consider household enterprises with less than 5 paid employees as being part of the informal sector (provided they are not registered).

They are engaged in non-agricultural activities, including secondary non-agricultural activities of enterprises in the agricultural sector.

All or at least some of the goods or services produced are meant for sale or barter, with the possible inclusion in the informal sector of households which produce domestic or personal services in employing paid domestic employees.

³International Labour Office. *Resolution concerning decent work and the informal economy*. 90th Session of the General Conference of the International Labour Organization. Geneva 2002, para. 3, p. 25.

⁴Source: International Labour Office. "Resolution concerning statistics of employment in the informal sector", *Current International Recommendations on Labour Statistics. 2000 Edition*. Geneva, 2000, pp. 32-40.

A useful additional characteristic (which is not part of the definition of the informal sector, but which gives supplementary information) is the location of the enterprise. Informal sector enterprises may be more likely to operate from the entrepreneur's home, from a market stall, or from some temporary location. Therefore, the type of place where the respondent usually works and/or its location is asked in the survey.

In summary, the employment in the informal sector is defined as employment in household-operated enterprises (private sector) with 2-4 paid employees. The *formal sector* comprises employment in Government and parastatal bodies, incorporated enterprises, quasi-corporate enterprises, and enterprises operated by a household with 5 and more regular paid employees.

Informal employment

This refers to the total number of *informal jobs*, whether carried out in formal sector enterprises, informal sector enterprises, or households (paid domestic workers, goods production for own-consumption), during a given reference period.⁵ *Notably*, informal employment refers to those jobs that generally lack basic social or legal protection or employment benefits. Thus, employees have informal jobs if their employment relationship is, in law or in practice, not subject to national labour legislation, income taxation, social protection or entitlement to certain employment benefits (advance notice of dismissal, severance pay, paid annual or sick leave, etc.).

Due to large diversity in informal employment, such jobs should be determined in accordance with the Bangladesh national circumstances.

The 17th ICLS recommends the following operational criteria for measuring informal jobs of employees:

- i. Lack of coverage by social security system
- ii. Lack of entitlement to paid annual or sick leave
- iii. Lack of written employment contract
- iv. Casual/temporary nature of work.

It should be noted that the mere presence of criterion “iii” or “iv” is not sufficient to consider a job as being informal.

Precarious employment

Workers in precarious employment can be either: (a) workers whose contract of employment leads to the classification of the incumbent as belonging to the groups of “casual workers”, “short-term workers” or “seasonal workers”; or (b) workers whose contract of employment will allow the employing enterprise or person to terminate the contract at short notice and/or at will, with the specific circumstances to be determined by national legislation and custom. In the case of workers falling under the first category, workers may be classified as “employees” or “own-account workers”, according to the characteristics of the employment contract. Workers under category (a) refer to the following:

- ≠ Casual workers – contracts are not expected to continue for more than a very short period.
- ≠ Seasonal workers – contract duration is influenced by seasonal factors, such as climate, public holidays and agriculture season.
- ≠ Short-term workers – contracts are expected to PREVIOUS for a short period but longer than that of casual workers. The common element among the precarious employment categories is the risky, short-term nature of the employment contracts (category a) or their instability, as employers may terminate them upon short notice (category b).

⁵ Interantionla Labour Office. *Guidelines concerning a statistical definition of informal employment*, adopted by the 17th ICLS (November 2003).

Persons outside the labour force

These are persons of working age who were neither in employment nor in unemployment in the short reference period.

Labour force participation rate

The labour force participation rate is a measure of the proportion of a country's working-age population that engages actively in the labour market, either by working or looking for work. It provides an indication of the size of the supply of labour available to engage in the production of goods and services, relative to the population at working age. The breakdown of the labour force by sex and age group gives a profile of the distribution of the economically active population within a country. The working-age population is the population above the legal working age – often aged 15 and older. The labour force participation rate is defined as the ratio of the labour force to the working-age population, expressed as a percentage. The labour force is the sum of the number of persons employed and the number of persons unemployed. Thus, the measurement of the labour force participation rate requires the measurement of both employment and unemployment. The labour force participation rate is related by definition to other indicators of the labour market. The inactivity rate is equal to 100 minus the labour force participation rate, when the participation rate is expressed as a number between 0 and 100. The labour force participation rate indicator plays a central role in the study of the factors that determine the size and composition of a country's human resources and in making projections of the future supply of labour. The information is also used to formulate employment policies, to determine training needs and to calculate the expected working lives of the male and female populations and the rates of accession to, and retirement from, economic activity – crucial information for the financial planning of social security systems. The indicator is also used for understanding the labour market behavior of different categories of the population. The level and pattern of labour force participation depends on employment opportunities and the demand for income, which may differ from one category of persons to another.

Status in employment⁶

It captures characteristics of the employment relationship and classifies jobs with respect to type of contract of employment (explicit or implicit) between job holder and economic unit. According to their status in employment, persons are classified as:

Employees

Persons who hold the type of jobs defined as *paid employment*. There is an agreement, which can be either formal or informal, between an enterprise and a person, whereby the person works for the enterprise in return for remuneration in cash or in kind - among whom countries may need and be able to distinguish "employees with stable contracts" (including *regular employees*);

Employers

Persons who hold self-employment jobs (i.e., whose remuneration depends directly on the (expectation of) profits derived from the goods and services produced) and engage one or more person to work for them as employees, on a continuous basis.

Own-account workers

Persons, who hold self-employment jobs and do not engage 'employees' on a continuous basis.

⁶ See: Resolution concerning the International Classification of Status in Employment (ICSE-93), adopted by the 15th ICLS in 1993; at: <http://www.ilo.org/stat>

Contributing family workers

Persons who hold self-employment jobs in an establishment operated by a related person, with a too limited degree of involvement in its operation to be considered a partner.

Members of producers' co-operatives

A member of a producer cooperative is a person who holds a self-employment job in an establishment organised as a co-operative, in which each member takes part on an equal footing with other members in determining the organisation of production, sales and/or other work, investments and the distribution of proceeds.

Employment by occupation

This concept refers to the kind of work done during the reference period by the person employed (or the kind of work done previously if unemployed). Information on occupation provides a description of a person's job. In the present context a job is defined as a set of tasks and duties performed, or meant to be performed, by one person, including for an employer or in self-employment. The occupation is classified according to the Bangladesh Standard Classification of Occupations 2020 (BSCO-2020) compatible with ISCO-08. The most recent version of the Bangladesh Standard classification of Occupations, distinguishes the following 10 major groups:

- (1) Managers;
- (2) Professionals;
- (3) Technicians and associate professionals;
- (4) Clerical support workers;
- (5) Service and sales workers;
- (6) Skilled Agricultural, Forestry and Fisheries workers;
- (7) Craft and related trade workers;
- (8) Plant and machine operators and assemblers;
- (9) Elementary occupations; and
- (10) Others occupations.

Employment by industry

Industry refers to the type of economic activity of the establishment, farm, business or organisation where the person works, as determined by the goods or services produced or provided to other units or persons. An economic activity is a combination of actions which results in products of goods or services; an industry is a group of units which carry out similar economic activities⁷. The industry is classified according to the Bangladesh Standard Industrial Classification 2020 (BSIC-2020), which is compatible with ISIC (Rev. 4). The most recent version of the International Standard Industrial Classification, ISIC rev-4, distinguishes 21 major groups as follows:

1. A "Agriculture, forestry and fishing "
2. B "Mining and quarrying"
3. C "Manufacturing"
4. D "Electricity, gas, steam and air conditioning supply"
5. E "Water supply, sewerage, waste management and remediation activities"
6. F "Construction"

⁷See: United Nations (2008a), International Standard Industrial Classification of All Economic Activities (ISIC), Rev.4 (online), available at: <http://unstats.un.org/unsd/cr/registry/isic-4.asp>

7. **G** "Wholesale and retail trade, repair of motor vehicles and motorcycles"
8. **H** "Transportation and storage"
9. **I** "Accommodation and food service activities (Hotel and restaurants)"
10. **J** "Information and communication"

Employment of disabled persons or person with functional difficulties

A person with difficulty in functioning may have activity limitations, which means difficulties an individual may have in executing activities.

For the purpose of this survey, functional difficulty is classified into six core categories. The concepts and definitions are based on the International Classification of Functioning, Disability, and Health (ICF) of the World Health Organization (WHO). These difficulties are the following:

- a. Difficulty in seeing, even if wearing eyeglasses
Seeing refers to an individual using his/her eyes and vision capacity in order to perceive or observe what is happening around him/her.
- b. Difficulty in hearing, even if using a hearing aid
Hearing refers to an individual using his/her ears and auditory (or hearing) capacity in order to know what is being said to him/her or the sounds of activity, including danger that is happening around him/her.
- c. Difficulty in walking or climbing steps
Walking refers to an individual using his/her legs in such a way as to propel himself/herself over the ground to get from one point or place to another. The capacity to walk should be without assistance of any device or human. If such assistance is needed, the person has difficulty in walking.
Difficulty in walking also refers to any difficulty with walking (whether it is on flat land or up or down steps) that a person considers a problem.
- d. Difficulty in remembering or concentrating
Difficulty in remembering or concentrating refers to a person who experiences a functional difficulty because of a health condition or health problem and may resort to taking notes, use of electronic reminder systems or with verbal cueing from personal assistants as a memory aid, and not because the person is busy or aging.
- e. Difficulty in self-caring (bathing or dressing)
Bathing refers to the process of cleaning one's entire body (usually with a soap and water). The washing activity includes cleaning hair down to the feet, as well as gathering any necessary items for bathing such as soap, shampoo, washcloth, or water.
Dressing refers to all aspects of putting clothing or garments on the upper and lower body, including the feet. Gathering clothing from storage areas (such as closet or dressers), securing buttons, tying knots, zipping, and others, should be considered part of the dressing activity.

This question refers not only to the washing of one's entire body but also includes all aspects of dressing the upper or lower body.

Difficulty in self-caring also refers to a person who is using assistive device or getting help from someone in bathing or dressing due to a health condition.

f. **Difficulty in communicating**

Communicating refers to an individual's exchanging information or ideas with other people through the use of language.

Difficulty may be experienced due to factors relevant to communication such as hearing loss, language problems as after a stroke, stuttering, anxiety, or any other factor related to a health condition.

Difficulty in communication takes into consideration the person's usual mode of communication (such as, spoken language, sign language, gestural, or with an assistive device such as hearing aid) and situations such as when others speak quickly, with background noise or with distractions. Difficulty in communication should be health related.

Migrant households

A "migrant household" is a household with at least one person migrated temporarily from Bangladesh to the rest of the world with a view to being employed other than on his own account.

Migrant Worker

A "migrant worker" is a person who migrated from Bangladesh to another country with a view to being employed other than on his own account, and includes any person regularly admitted as a migrant for employment.

Returned Labour Migrants

There is no clear definition of return migration. However there is widespread use of the definition formulated by the United Nations' Statistics Division for collecting data on international migration, according to which 'returnees are 'persons returning to their country of citizenship after having been international migrants (whether short-term or long-term) in another country and who are intending to stay in their own country for at least a year' (SOPEMI 2008: 164).

SDG indicator 10.7.1

"Recruitment cost borne by employee as a proportion of monthly income earned in country of destination", i.e. a ratio between a cost measure and an income measure. The statistics used for the numerators and denominators for indicator 10.7.1 should be based on costs and earnings observed for the same individual international migrant worker.

Recruitment Costs

Recruitment costs refer to any fees or costs incurred in the recruitment process in order for workers to secure employment or placement, regardless of the manner, timing or location of their imposition or collection. These are equal to the total amount that migrant workers and/or their families paid to find, qualify for, and secure a concrete job offer from a foreign employer and to reach the place of employment for the first job abroad.

Earnings

Statistics on earnings of migrant workers abroad should cover the actual income received for the last month in the first job in the destination country, including bonuses and other earnings (e.g. for over-time work). Adjustments should be made for any deductions for destination country taxes and social security contributions, as well as for any deductions in wages made to recover any recruitment costs initially paid by the employer. Here, this survey has used the average monthly income of first three months income.

Unit of interview

Unit of interview is any member of randomly selected households, and the unit of selection can be any household selected for the sample. The basic socio-demographic data have been collected for all members of the selected households, however for the employment status and related characteristics have been collected only for persons aged 15 years or older.

Reference period

The interviews are uniformly distributed for the entire quarter, being carried out continuously (weekly) in each month of a given quarter. The reference period is a week, prior to the interview.

Unemployment rate

Unemployment rate is the proportion of unemployed population to the total population in labour force. This rate measures the percentage of unemployed population in labour force.

Employment to population ratio

The employment-to-population ratio is defined as the proportion of a country's working-age population that is employed. A high ratio means that a large proportion of a country's population is employed while a low ratio means that a large share of the population is not involved directly in market-related activities, because they are either unemployed or (more likely) out of the labour force altogether.

Reliability of data

Since the survey estimates are based on a sample survey, they are subjected to sampling and non-sampling errors.

Non-sampling error

To ensure high quality data, several steps were taken to minimize non-sampling errors. Unlike sampling errors, these errors cannot be measured and can only be overcome through several administrative procedures. These errors can arise as a result of incomplete survey coverage, frame defect, response error, non-response and processing errors such as during editing, coding and data capture.

Response error

Response error can occur due to differences and difficulty in interpreting questions, either by the enumerator or respondent. To minimize this error, intensive seven day long basic training and several refreshing trainings were conducted for the enumerators as well as supervising officers. In addition, random checks by the high-level officials of BBS and SID were carried out on households that were already canvassed by the enumerators to ensure the validity of the information recorded.

With regard to editing and processing errors, several consistency checks were done, both manually and computerized programme using CSPro; batch editing was done using STATA, to ensure the quality and acceptability of the data produced.

Rounding of estimates

The sum of individual figures may not always equal to the totals shown in related tables because of independent rounding to one decimal place.
